

One traveler, one trip, two conditions

Baseline

Traveler + trip
Current travel conditions

Changed condition

Same traveler + trip
Delay, fare, access or rain

Response = change in the choice distribution

1 Learn the change

Does the Student preserve
the Teacher response?

2 Compare with people

Does that response agree
with stated choices?

3 Follow the response

Do predicted changes survive
assignment and boarding?

Each comparison answers a different question; none substitutes for the others.
